SUMMARY

Design, develop, and deploy high-impact Android applications with 7+ years of experience. I have successfully led the development of critical features, ensuring seamless functionality and high user satisfaction. By collaborating with cross-functional teams, I drive product success and achieve key business objectives. Beyond my core role, I am deeply committed to knowledge sharing within the Southeast Asian developer community. As a Google Developer Expert, I host workshops and present at conferences to make Android technology more accessible, ultimately strengthening the region's tech ecosystem.

WORK EXPERIENCE

eWIDEPLUS Corp. - Android Engineer

2021 - current

Jakarta, Indonesia

Product - LINE Bank by Hana Bank (Digital Banking)

- Scaled user acquisition to **1M+ downloads** as measured by successful Play Store launch and market penetration, by leading the **architectural design of five critical core features** such as end-to-end onboarding (account creation to video call verification), Prima and BI Fast transfer networks, debit card requests, and e-wallet top-ups.
- Boosted **transaction volume by 12%** as measured by increased user engagement with payment methods, by engineering a **geofencing promotional campaign** that delivered targeted notifications to users within merchant radius areas.
- Accelerated **issue resolution time by 30%** as measured by optimized testing and production maintenance for millions of users, by streamlining communication channels and implementing robust security measures in collaboration with penetration testers.
- Streamlined user onboarding efficiency as measured by accurate automated ID recognition, by designing an internal **eKYC SDK** utilizing on device **MLKit** and future proofing the architecture for **Android 15 (16 KB page size compatibility)**.
- Scaled **digital wealth management capabilities** by enabling automated 24/7 mutual fund transactions for 1M+ users. Architected the end-to-end integration of a **Robo Advisor engine**, automated **investor account provisioning (SID/IFUA)** via **National ID verification**, and a secure portfolio management system handling complex subscription and redemption workflows.
- Scaled enterprise **funding growth** as measured by automating **bulk onboarding for thousands of corporate employees**, by developing a robust data processing pipeline for secure identity validation against core banking systems and implementing an automated enrollment flow with integrated multi channel notifications.

Product - OrKa (AI Spatial Assistant for Vision Pro and Meta Quest)

- Redefined web and object interaction in **spatial environments** as measured by delivering a **dynamic 360° immersive dashboard** and real-time object customization, by developing **OrKa**, an AI assistant that integrates **Personalized RAG** for real-time website insights and **AI-driven object detection**.

Product - AAC and Immersive Communication Tools (Education and Accessibility)

- Optimized multi-device accessibility and user engagement as measured by seamless UI/UX performance across **mobile, tablet, and foldable form factors**, by developing a responsive **flutter based AAC application** featuring complex drag and drop interactions, real-time symbol searching, and adaptive layouts for diverse screen resolutions.
- Improved communication efficiency for non-verbal users as measured by **30% faster symbol to speech interaction** and reduced accidental touches, by re-architecting the **status bar and symbol grid** system with optimized touch targets, long press deletion logic, and haptic feedback during spatial symbol arrangement.
- Enhanced data driven user insights as measured by **high-fidelity visualization** on small and large screens, by implementing a **scalable statistics dashboard** with auto scrolling graph layouts and parameterized profile management for caregivers.

PT Elektronik Distribusi Otomasi Terkemuka (eDOT) - Technology Consultant (Contract)

January - May 2026, Remote

- Improved application reliability as measured by increasing **unit test coverage from 52% to 98%**, by resolving legacy technical debt and implementing **modern android development patterns**.
- Optimized field force coordination as measured by resolving a critical lack of supervisor monitoring, by architecting a **Join Visit feature** using **Clean Architecture components** to structure robust data flows.
- Enhanced application availability in **low connectivity areas** as measured by enabling **seamless offline to online transitions** by engineering the **unification of separate offline/internal and online/Play Store branches** into a single, **network aware codebase**.
- Optimized field transaction reliability as measured by **eliminating potential revenue loss due to network instability** by architecting a robust **store and forward synchronization engine** using **Room persistence** to handle Draft, Multiple, and Post Visit Orders in offline environments.
- Boosted salesman engagement as measured by real time tracking of performance metrics, by developing a dynamic **Leaderboard feature** for the [eWork](#) and [eMitra](#) SFA applications [Nabati Group](#).

PT Integrasi Data Nusantara - Android and Flutter Trainer

2018 - 2021

Bogor, Indonesia

- Boosted student acquisition and engagement as measured by a **38% increase in registrations and consistent 100% enrollment rates per semester**, by designing and implementing three comprehensive, project based curricula (Beginner, Intermediate, Advanced) for Android and Flutter learning paths.
- Expanded institutional educational resources as measured by supporting the learning journey of **hundreds of students within IDN Class**, by authoring and publishing two specialized technical books covering full stack Android and Flutter development from beginner to intermediate levels.
- Optimized educational delivery and student success as measured by maintaining a consistent **82% average student satisfaction** rate across all semesters, by delivering multi level technical training and mentorship for both native Android and cross platform Flutter development paths.

PT Dicoding Indonesia - Flutter External Code Reviewer Part Time

2019 - 2021, Remote

- Improved student **technical proficiency and course success rates** as measured by the **comprehensive evaluation of 1,500+ student projects**, by performing **meticulous code reviews** to ensure strict adherence to industry best practices, project requirements, and predefined completion criteria.
- Enhanced student **satisfaction and code quality** as measured by **consistently earning 5-star student ratings**, by providing **constructive architectural feedback** that optimized readability, eliminated boilerplate code, and refined overall submission quality.

PT Can Creative - Junior Android Developer Intern

2017 - 2018

Semarang, Indonesia

- Accelerated **professional tenure and maintenance responsibilities** as measured by a **3-month internship extension**, by collaborating within a two member Android team to successfully deliver a comprehensive Palm Oil price monitoring application.
- Delivered **high-quality product visualization and market data tracking** as measured by a **9.8/10 client satisfaction rating**, by developing **core application features** including a detailed product catalog and dynamic price charts.

EDUCATION

Semarang State of Polytechnic - Associate Degree of Informatic Engineering
2015 - 2018

Semarang, Indonesia

SMK N 1 Rembang - Computer and Network Engineering
2012 - 2015

Rembang, Indonesia

SKILLS

Java; Kotlin; Dart; AGSL; SQL; Android SDK; MVVM; MVI; Multimodule Architecture; XML; Material Design; Jetpack Compose; Media3; KMM; Retrofit; Coroutines; Threads; Handlers; RxJava; Dagger2; Hilt; Koin; SQLite; Room; Firebase; Crashlytics; MLKit; MediaPipe; Personalized RAG; JUnit, Mockito; Espresso; Spatial UI/UX; 3D Rendering Optimization; Jetpack Compose for XR; Meta XR SDK; Subversion (SVN); Jenkins; Flutter; BLOC; Cubit; GetX;
